SUBJECT Laboratory Analysis Results of Groundwater Samples Collected from the Private Water Well Treatment System Located at 2075 Marlow Road, Santa Rosa, California.

Mr. Mahoney:

At the request of Redwood Oil Company (Redwood), Environmental Resolutions, Inc. (ERI) is providing the analytical laboratory results of the groundwater samples collected from the private water well and water well treatment system located at 2075 Marlow Road, in Santa Rosa, California. The well head treatment system consists of two 110-pound granulated activated carbon vessels connected in series; an ultraviolet light source; system totalizer; and influent, intermediate, and effluent sampling ports.

On February 27, 2006, ERI collected influent, intermediate, and effluent water samples from the groundwater treatment system. ERI submitted the influent water samples to a California state-certified laboratory, under Chain-of-Custody protocol, for analysis for total petroleum hydrocarbons as diesel; total petroleum hydrocarbons as gasoline; benzene, toluene, ethylbenzene, and total xylenes; methyl tertiary butyl ether, tertiary butyl alcohol, di-isopropyl ether, ethyl tertiary butyl ether, 1,2-dichloroethane, 1,2-dibromoethane, and tertiary amyl methyl ether using the laboratory methods listed on the Laboratory Analysis Report (attached). Dissolved-phase hydrocarbons and related compounds were not present in reportable concentrations in the influent water samples. Therefore intermediate and effluent water samples were not analyzed. Results of laboratory analysis of the water sample are summarized on the attached table.

Please contact Mr. Glenn L. Matteucci, ERI's project manager for this site, at (707) 766-2000 with any questions.

Sincerely,
Environmental Resolutions, Inc.
